Case #: PB 2019-08
Date: September 5, 2019
Recommendation: Conditional Approval

PLANNING STAFF REPORT

Site: 346 Somerville Avenue

Applicant Name: 346 Somerville Ave., LLC
Applicant Address: P.O. Box 610312, Newton, MA 02461
Owner Name: Palmac Realty Corp
Owner Address: 346 Somerville Avenue, Somerville, MA 02143

City Councilor: J.T. Scott

Legal Notice: Applicant, 346 Somerville Avenue, LLC, and Owner, Palmac Realty Corp, seek Special Permits and Special Permit with Site Plan Review (SPSR) to construct a 100-unit residential structure with inclusionary housing. SZO sections and articles including §4.4.1, §8.5, §7.11, Article 9, Article 13. CCD55 zone. Ward 2.

Dates of Public Hearing: Planning Board – September 5, 2019

I. PROJECT DESCRIPTION

Note: The project is in the CCD-55 zoning district. Though this project also needs variances, pursuant to M.G.L. Chapter 40A, only a Zoning Board has purview to grant variances. The Planning Board must make their determinations regarding the granting of special permits based on their analysis of the proposal, not on whether the ZBA does or does not grant the variances requested. All considerations, including design, site layout, landscaping, etc., come under the purview of the Planning Board.

1. Subject Property: 346 Somerville Avenue is a two-story commercial structure in the CCD-55 zoning district. The property is a through property that runs from Somerville Avenue down to Lake Street. The Somerville Avenue frontage of the property is currently the site of Sullivan Plumbing.

2. Proposal: The applicant proposes to demolish the existing structure and construct a six-story mixed-use building containing 94-unit residential units and street level commercial space. The bulk of the building will be constructed along the Somerville Avenue portion of this through-lot. The rear portion of the lot, roughly 7,000 +/- square feet of land, will be transformed into a public park. The park will be created through an interactive public process and will involve a team of city staff from the legal, landscape/public space, and regulatory planning disciplines working with the development team and the neighborhood.

The Applicant requires the following dimensional relief from the Planning Board:

- Parking (**special permit**)

3. Comments:

Ward Councilor: Councilor J.T. Scott has been very involved in this project and the public process associated therewith for over a year and has worked closely with the neighborhood, Applicant, and staff planner.

II. FINDINGS FOR SPECIAL PERMITS (SZO §4.4.1 and Article 9 and SPECIAL PERMIT WITH SITE PLAN REVIEW (SPSR)):

In order to grant a special permit, the SPGA must make certain findings and determinations as outlined in §5.1.4 of the SZO. This section of the report goes through §5.1.4 in detail.

1. Information Supplied:

The Staff finds that the information provided by the Applicant conforms to the requirements of §5.1.2 of the SZO and allows for a comprehensive analysis of the project with respect to the required Special Permits.

2. Consistency with Purposes: *The Applicant has to ensure that the project "is consistent with (1) the general purposes of this Ordinance as set forth in Article 1, and (2) the purposes, provisions, and specific objectives applicable to the requested special permit which may be set forth elsewhere in this Ordinance, such as, but not limited to, those purposes at the beginning of the various Articles."*

Staff finds that the proposal is consistent with the general purposes of the Ordinance as set forth under §1.2, which includes, but is not limited to promote the health, safety, and welfare of the inhabitants of the City of Somerville; to provide for and maintain the uniquely integrated structure of uses in the City; to lessen congestion in the streets; to protect health; to secure safety from fire, panic and other dangers; to provide adequate light and air; to prevent the overcrowding of land; to avoid undue concentration of population; to conserve the value of land and buildings; to adequately protect the natural environment; to encourage the most appropriate use of land throughout the City; and to preserve and increase the amenities of the municipality.

Staff finds that the proposal for 94 residential units is greater density than is typically found in Union Square. However, the proposed increased density is not incompatible with the direction in which the City is moving in general and with regard to Union Square in particular. Staff finds the mixed-use nature of the proposal, the increased density, the de-emphasis on personal vehicular dependency, the inclusion of a new public park, and a partial green roof all in alignment with the goals of the City.

3. Site and Area Compatibility: *The Applicant has to ensure that the project "(i)s designed in a manner that is compatible with the characteristics of the built and unbuilt surrounding area, including land uses."*

Surrounding Neighborhood:

This portion of Union Square – and Union Square as a whole – presents an eclectic mix of building forms, styles, scale, and uses. Immediate abutting properties include 2 ½-story wood-frame structures, triple-deckers, Mansards, single-story faux stone veneered commercial structures, old and updated storefronts. Immediately across Somerville Avenue is Bow Market. The Olive Square neighborhood, which includes Lake Street, is located behind this property and is residential in massing and use.

Impacts of Proposal (Design and Compatibility):

The proposal will be the first of its kind and size in this portion of Union Square. As with any project of this magnitude, it underwent a strenuous community process over the last year. The project presented to the Planning Board is the result of these negotiations between the neighborhood, staff planner, ward councilor, and Applicant. The Somerville Avenue façade of the building is intended to be responsive to the more traditional feel of larger brick-faced storefront and residential buildings situated in Union Square without engaging in the mimicry thereof.

Applications for Special Permits with Site Plan Review in Residence Districts must meet the design guidelines under SZO §5.2.4. The design guidelines for residential districts are as follows:

- a. ***Buildings should be generally of the same size and proportions as those existing in the neighborhood. This shall apply in cases of multi-family development as well as one-, two-, and three-family units. For example, if relatively small two- and three-family structures are common in a neighborhood where multi-family development is proposed, the multi-family development should be physically broken into components that, from a design perspective, are housed in buildings of similar width, depth, and height as those typically found in the neighborhood.***

Staff has addressed this criterion above in the “Site and Compatibility” assessment and reiterates those comments here.

- b. ***Use of traditional and natural materials is strongly encouraged (e.g. wood clapboard, wood shingles, brick).***

The new building will be clad in a combination of “traditional” and “modern” materials. Current proposed materials include brick, limestone veneer, metal, brick . All brick used will be required to be **full brick** and not thin brick.

- c. ***Additions to existing structures should be consistent with the architecture of the existing structure in terms of window dimensions, roof lines etc.***

N/A

- d. ***Although additions should not clash with or be incompatible to the existing structure, it is acceptable and even desirable for the new construction to be distinguishable from the existing building, perhaps by maintenance of design elements of the original building that would otherwise be lost (e.g. false rakes, fasciae, and the like).***

N/A

- e. ***Where practical, new or infill building construction should share the same orientation to the street as is common in the neighborhood. When not contrary to any other zoning law, front and side yards should be of similar dimensions as those typical in the area.***

The main façade of the proposed building is oriented toward the main street, Somerville Avenue.

- f. ***Driveways should be kept to minimal width (perhaps a maximum of twelve (12) feet), and be designed so that no vehicle parked on the drive may straddle the public sidewalk in any way. Low barriers or plantings may be required to separate the parking area from the pedestrian space.***

The existing Somerville Avenue entry point to the site shall remain but shall be used only for a loading bay. There will be no other vehicular access to/from the site.

- g. ***Transformers, heating and cooling systems, antennas, and the like, should be located so they are not visible from the street or should be screened.***

This staff report has been conditioned such that items such as this shall be screened and that trash and recycling shall be picked up by private contractor. Trash and recycling shall be required to be stored inside until trash/recycling day. In terms of transformers, a condition has been added that allows for transformers to be vaulted and buried or installed in the building. Ultimately, the siting of the transformer is solely within the purview of EverSource, not the Planning Office. The condition that was added regarding transformers was intended to try to guide the transformer installation according to City desires. However, there is no forcing the utility to follow this direction.

- h. ***Sites and buildings should comply with any guidelines set forth in Article 6 of this Ordinance for the specific base or overlay zoning district(s) the site is located within.***

There is no overlay zoning district in this area and Staff finds that the proposal meets with the general purposes of the CCD-55 zoning district by providing a mixed-use building with ground floor, pedestrian-accessible commercial space. That the Applicant is also providing a publicly-accessible park that can be reached from both Somerville Avenue and Lake Street as part of this project is not required by the zoning but is an added benefit to the neighborhood.

5. Functional Design: *The project must meet “accepted standards and criteria for the functional design of facilities, structures, and site construction.”*

Based upon feedback received to-date from various City departments, the project meets accepted standards and criteria for the functional design of facilities, structures, and site construction. Any necessary mitigation or minor design changes have been incorporated into the recommended conditions section of this report. If any further mitigation or design changes are needed once work on the site is in-progress, it will be addressed by appropriate City departments as-needed at that time.

6. Impact on Public Systems: *The project will “not create adverse impacts on the public services and facilities serving the development, such as the sanitary sewer system, the storm drainage system, the public water supply, the recreational system, the street system for vehicular traffic, and the sidewalks and footpaths for pedestrian traffic.”*

The site is covered by building, pavement, and gravel/dirt/weeds. Much of the lot is used for surface parking. Despite the larger size of the proposed building on the site, improved positioning and a comprehensive landscaping plan calling for a public park and a partially-green roof will provide for significantly more quality green space on the parcel than is currently extant.

Conditions have been added that require the applicant to work with Mobility and with Engineering to address transportation management and city water/sewer issues that will be impacted as a result of this project. All related work undertaken in these regards will be under the direction of the Director of Engineering, the Director of Mobility and/or their designees.

In order to determine the specific impact that the proposed project will have on traffic operations, a traffic and parking study was performed in May, 2019.

7. Environmental Impacts: *“The proposed use, structure or activity will not constitute an adverse impact on the surrounding area resulting from: 1) excessive noise, level of illumination, glare, dust, smoke, or vibration which are higher than levels now experienced from uses permitted in the surrounding area; 2) emission of noxious or hazardous materials or substances; 3) pollution of water ways or ground water; or 4) transmission of signals that interfere with radio or television reception.”*

The proposed mixed use and creation of a 7,000 +/- square-foot publically-accessible park are not expected to adversely impact the environment. No new noise, glare, smoke, vibration, nor emissions of noxious materials, nor pollution of water ways or ground water, nor transmission of signals that interfere with radio or television reception are anticipated as part of the proposal.

Typical construction noise for a project this size can be expected. Oversight and enforcement of environmental issues on the site rests with the Commonwealth of Massachusetts and not with the City of Somerville. The inclusion of a 7,000+/- square foot publically-accessible park along with a partial green roof provide visual, environment, and health benefits to site and area residents.

8. Consistency with Purposes: *“Is consistent with: 1) the purposes of this Ordinance, particularly those set forth in Article 1 and Article 5; and 2) the purposes, provisions, and specific objectives*

applicable to the requested special permit with site plan review which may be set forth elsewhere in this Ordinance, such as, but not limited to, those at the beginning of the various sections.”

Staff finds that the proposal is consistent with the general purposes of the Ordinance as set forth under §1.2, which includes, but is not limited to, to promote the health, safety, and welfare of the inhabitants of the City of Somerville; to provide for and maintain the uniquely integrated structure of uses in the City; to protect health; to secure safety from fire, panic and other dangers; to provide adequate light and air; to facilitate the adequate provision of transportation, water, sewerage, schools, parks and other public requirements; to conserve the value of land and buildings; to adequately protect the natural environment; to encourage the most appropriate use of land throughout the City; to protect and promote a housing stock that can accommodate the diverse household sizes and life stages of Somerville residents at all income levels, paying particular attention to providing housing affordable to individuals and families with low and moderate incomes; and to preserve and increase the amenities of the municipality.

9. Preservation of Landform and Open Space: *The Applicant has to ensure that “the existing land form is preserved in its natural state, insofar as practicable, by minimizing grading and the erosion or stripping of steep slopes, and by maintaining man-made features that enhance the land form, such as stone walls, with minimal alteration or disruption. In addition, all open spaces should be designed and planted to enhance the attractiveness of the neighborhood. Whenever possible, the development parcel should be laid out so that some of the landscaped areas are visible to the neighborhood.”*

The project site slopes from Somerville Avenue down to Lake Street. The general slope of the site will be retained. The building mass has been pushed away from Lake Street after extensive feedback from the abutting residential neighborhood. For a building of this density, the mass is best positioned along the major thoroughfare of Somerville Avenue. It is intended in the Union Square plan that greater density be placed along this street frontage.

10. Relation of Buildings to Environment: *The Applicant must ensure that “buildings are: 1) located harmoniously with the land form, vegetation and other natural features of the site; 2) compatible in scale, design and use with those buildings and designs which are visually related to the development site; 3) effectively located for solar and wind orientation for energy conservation; and 4) advantageously located for views from the building while minimizing the intrusion on views from other buildings.”*

The proposed building is designed to work with the sloped site as noted above. With a building of this size, it is difficult to mask its height and massing from the smaller residential structures along Lake Street at the rear of the property. The construction of the park, planting of street trees, and the construction of the main massing away from Lake Street all work in concert to help mitigate the visual massing of the new structure.

11. Stormwater Drainage: *The Applicant must demonstrate that “special attention has been given to proper site surface drainage so that removal of surface waters will not adversely affect neighboring properties or the public storm drainage system. Storm water shall be removed from all roofs, canopies, and paved area, and routed through a well-engineered system designed with appropriate storm water management techniques. Skimming devices, oil, and grease traps, and similar facilities at the collection or discharge points for paved surface runoff should be used, to retain oils, greases, and particles. Surface water on all paved areas shall be collected and/or routed so that it will*

not obstruct the flow of vehicular or pedestrian traffic and will not create puddles in the paved area. In larger developments, where practical, the routing of runoff through sheet flow, swales or other means increasing filtration and percolation is strongly encouraged, as is use of retention or detention ponds. In instances of below grade parking (such as garages) or low lying areas prone to flooding, installation of pumps or other devices to prevent backflow through drains or catch basins may be required.”

The proposed project improves the permeability of this site through the installation of permeable hard surfaces and landscaping. The project further includes substantial pre-construction site work that will address water flow through the site itself and extensive drainage/stormwater capture systems. All of this infrastructure work is under the purview of the Director of Engineering and their designee(s). As is typical of a project of this scale, this report is conditioned to require the Applicant to submit their civil engineering plans to the City’s Engineering Department for their review, comment, and sign-off.

12. Historic or Architectural Significance: *The project must be designed “with respect to Somerville’s heritage, any action detrimental to historic structures and their architectural elements shall be discouraged insofar as is practicable, whether those structures exist on the development parcel or on adjacent properties. If there is any removal, substantial alteration or other action detrimental to buildings of historic or architectural significance, these should be minimized and new uses or the erection of new buildings should be compatible with the buildings or places of historic or architectural significance on the development parcel or on adjacent properties.”*

The existing building has already completed the demolition review process with the Historic Preservation Commission. The Applicant and Owners have entered into a Memorandum of Agreement (MOA) with the HPC allowing for the demolition of the building and for specific preservation goals to be met, including the creating of silicon molds of some of the decorative architectural trim and that castings of this trim be incorporated into the exterior façade of the new building. This has been captured in the current façade design. All HPC conditions have been codified in the MOA with the HPC.

13. Enhancement of Appearance: *The Applicant must demonstrate that “the natural character and appearance of the City is enhanced. Awareness of the existence of a development, particularly a non-residential development or a higher density residential development, should be minimized by screening views of the development from nearby streets, residential neighborhoods of City property by the effective use of existing land forms, or alteration thereto, such as berms, and by existing vegetation or supplemental planting.”*

The overall appearance of the site will improve as a result of the proposed development. Though the proposed building is much larger than the one currently extant on the property, the new structure is not inconsistent with the Union Square neighborhood plan and overall City goals. Enhancements to the site and public sphere have been discussed throughout this document. To recap, they include, but are not limited to creation of a publicly-accessible park, partial green roof, mobility management systems, planting of street trees.

14. Lighting: *With respect to lighting, the Applicant must ensure that “all exterior spaces and interior public and semi-public spaces shall be adequately lit and designed as much as possible to allow for surveillance by neighbors and passersby.”*

Staff has included a condition that all exterior lighting must be confined to the subject property, cast light downward and must not intrude, interfere or spill onto neighboring properties. Park lighting will be addressed during the park design process with the entities noted in condition #12.

15. Emergency Access: *The Applicant must ensure that “there is easy access to buildings, and the grounds adjoining them, for operations by fire, police, medical and other emergency personnel and equipment.”*

Emergency personnel will have access to the building from all sides of the property with the narrowest access being along the right elevation. The building is also required to meet state fire code. The City’s Fire Prevention personnel are responsible for inspecting and approving the building according to fire regulations.

16. Location of Access: *The Applicant must ensure that “the location of intersections of access drives with the City arterial or collector streets minimizes traffic congestion.”*

The existing curb cut on the right elevation of the property shall be retained.

17. Utility Service: *The Applicant must ensure that “electric, telephone, cable TV and other such lines and equipment are placed underground from the source or connection, or are effectively screened from public view.”*

The Applicant is required to present their electrical/utility plan to Lights & Lines and Highways. There is a condition that any new lines would be placed underground in accordance with the SZO and the policies of the Superintendent of Lights and Lines.

18. Prevention of Adverse Impacts: *The Applicant must demonstrate that “provisions have been made to prevent or minimize any detrimental effect on adjoining premises, and the general neighborhood, including, (1) minimizing any adverse impact from new hard surface ground cover, or machinery which emits heat, vapor, light or fumes; and (2) preventing adverse impacts to light, air and noise, wind and temperature levels in the immediate vicinity of the proposed development.;*”

The site will be improved through new drainage systems, landscaping, and pervious material. Furthermore, there will not be machinery that emits heat, vapor, light or fumes beyond those of a typical multi-unit residential use. Staff finds that the proposed building is appropriately scaled along a key City thoroughfare.

19. Signage: *The Applicant must ensure that “the size, location, design, color, texture, lighting and materials of all permanent signs and outdoor advertising structures or features shall reflect the scale and character of the proposed buildings.”*

N/A

20. Screening of Service Facilities: *The Applicant must ensure that “exposed transformers and other machinery, storage, service and truck loading areas, dumpsters, utility buildings, and similar structures shall be effectively screened by plantings or other screening methods so that they are not directly visible from either the proposed development or the surrounding properties.”*

Staff has conditioned this report to require interior storage of trash/recycling and private pick-up. Private snow removal is also required. Trash and recycling storage will be in/under the building.

21. Screening of Parking: *The Applicant must ensure that “the parking areas should be screened or partitioned off from the street by permanent structures except in the cases where the entrance to the parking area is directly off the street.”*

There will be no parking provided with this project. Not providing on-site parking in this area is consistent with the City’s goals in transformational and transportation-focused areas of the City. This property is within walking distance of the in-progress Union Square Green Line “T” stop.

Articles 7, 8, 9, and 13 of the SZO

With the proposal of 94 units, a Special Permit with Site Plan Review (SPSR) is required (7.11.c). Further, when an SPSR project is proposed, Article 13 of the SZO is triggered. This section of the SZO requires that 20% of the residential units for an SPSR project such as this be inclusionary (affordable). The Applicant is proposing a total of 94 units with this project. Twenty percent (20%) of 94 equates to 18 on-site inclusionary units plus a fractional payment of 0.8. The City of Somerville’s Housing Office will select which units will be deemed inclusionary and at what rate.

§9.13 of the SZO

As noted earlier in this report, when inclusionary units are being provided under Article 13 of the SZO, parking relief can be requested as a Special Permit, regardless of the number of spaces of relief that are needed.

Pursuant to §9.13 of the SZO, Staff provides the following assessment:

1. Increase in traffic volumes: Given that 94 residential units will be provided on the site there may be an increase in traffic volume due to the increased density on the site. However, this project is specifically designed to attract residents who eschew personal vehicle dependency.
2. Increased traffic congestion or queuing of vehicles: The project site is along busy Somerville Avenue. There are and will continue to be traffic impacts because of future infrastructure work and private redevelopment efforts along this and other City streets.
3. Change in the type(s) of traffic: Other than during the construction phase of the project when construction-related vehicles will be approaching and retreating from the site, future vehicular traffic to-and-from this site will be for deliveries along Somerville Avenue, trash/recycling pick-up and snow removal.

4. Change in traffic patterns and access to the site: There will be no changes to the traffic patterning approaching or exiting the site as a result of this project.

5. Reduction in on-street parking: There will be no parking provided on this site. This is in concert with overall City goals, Union Square goals, and the pending zoning overhaul. Under the new zoning, there will be no requirement for an Applicant to provide parking on this site at all, with no zoning relief required. Under current zoning, due to the provisions of Article 13, all parking relief is granted under Special Permitting provisions.

6. Housing Impact:

The proposal provides for three 94 total units. 10 will be one-bedroom and 84 will be studios. Out of this number, a total of 18 inclusionary units will be provided on-site. A 0.8 fractional payment will be made into the Somerville Affordable Housing Trust Fund.

7. SomerVision Plan:

The proposal visually improves an existing property and increases the City's housing stock by 94 total units with 18 of those units inclusionary along with a 0.8 fractional payment. The proposal of not providing parking aligns with our goals of reducing individual vehicular dependency. The publicly-accessible park and partial green roof address environmental, health, and stormwater containment interests. The process of constructing the building and the future commercial tenants will both provide temporary and permanent jobs within the City.

III. RECOMMENDATION (Articles 7, 8, 9, & 13 of the SZO)

Based on the materials submitted by the Applicant, the above findings and subject to the following conditions, the Planning Staff recommends **CONDITIONAL APPROVAL** of the requested **SPECIAL PERMITS** and **SPECIAL PERMIT WITH SITE PLAN REVIEW (SPSR)**.

The recommendation is based upon a technical analysis by Planning Staff of the application material based upon the required findings of the Somerville Zoning Ordinance, and is based only upon information submitted prior to the public hearing. This report may be revised or updated with new recommendations, findings and/or conditions based upon additional information provided to the Planning Staff during the public hearing process.

#	Condition	Timeframe for Compliance	Verified (initial)	Notes						
1	Approval is for variances to construct a building with a 226 lot area per d.u. and a building height of 64' 10".	BP/CO	ISD/Plng.

August 27, 2019	Updated plans submitted to OSPCD									
Any changes to the approved elevations that are not <i>de minimis</i> must receive SPGA approval.										
Affordable Housing										
1	Affordable Housing Implementation Plan (AHIP) shall be approved by the OSPCD Housing Division and executed prior to issuance of Building Permit. Affordable units shall be provided on-site.	BP	Housing							
2	Written certification of the creation of affordable housing units, any fractional payment required, or alternative methods of compliance, must be obtained from the OSPCD Housing Division before the issuance of a Certificate of Occupancy (C.O.). No C.O. shall be issued until the OSPCD Housing Division has confirmed that the Affordable Housing Restriction has been approved and recorded and the developer has provided the promised affordable units on-site.	CO	Housing							
3	No Certificate of Occupancy shall be issued until the OSPCD Housing Division has confirmed that: (for Condominium Projects) the Condominium Documents have been approved and the Developer has agreed to a form of Deed Rider for the Affordable Unit(s), or (for Rental Projects) the Developer has agreed to and executed a Memorandum of Understanding for Monitoring of the Affordable Unit(s).	CO	Housing							
4	The OSPCD Housing Division shall determine which units shall be inclusionary and at what rate.	CO	Housing							
Construction Impacts										

5	The applicant shall post the name and phone number of the general contractor at the site entrance where it is visible to people passing by. This information shall be posted to be easily readable from the public sidewalk along Prospect Street.	During Construction	ISD	
6	All construction materials and equipment must be stored onsite. If occupancy of the street layout is required, such occupancy must be in conformance with the requirements of the Manual on Uniform Traffic Control Devices and the prior approval of the Traffic and Parking Department must be obtained.	During Construction	T&P	
7	Construction shall occur from 7:30am – 5:00pm Monday-Friday ONLY. There shall be no construction or construction-related work allowed on the weekends or holidays or after hours. This includes deliveries and finish work.	During Construction	ISD	
8	There shall be no idling of construction vehicles on the site or on surrounding streets.	During construction	ISD/T&P	
9	No parking of construction-related vehicles, including personal vehicles, shall be permitted on Somerville Avenue, Hawkins or Lake Streets unless otherwise authorized by the Parking Division.	During construction	ISD/T&P	
10	Dumpsters shall not be allowed on Somerville Avenue, Hawkins or Lake Street.	Pre- and during construction	ISD/T&P	
Design				
11	Applicant shall provide material samples for siding, trim, windows, and doors to Planning Staff for review and approval prior to the issuance of a building permit.	BP	Plng./ISD	
Site				
12	Roughly 7,000+/- square feet on the Lake Street side of the property shall become a publicly-accessible park. The type of park (city-owned, POPS, or other) shall be determined between the City Legal, Public Space & Urban Forestry, and regulatory Planning departments and the Applicant. Under all circumstances, the park shall be 100% publically-accessible and cannot be closed to the public for the sole use of building residents, tenants, or private events. The Applicant and the City shall enter into a legal agreement of terms including, but not limited to access, maintenance, liability, design, construction, materials, etc. Park design shall include public input. Legal, regulatory planning, and public space planning/landscape planners shall all be involved. Park shall be completed in order for CO to be granted.	CO	Plng/Le gal/ISD	
13	All bituminous material and/or cement shall be removed from the site and be replaced with pervious pavers, pea stone or similar. All materials to be used shall be submitted to Planning Staff for their review and approval prior to ordering/installation.	Prior to ordering/inst allation / CO	Plng./ISD	
14	Transformers shall be located inside the building or shall be vaulted. Location of transformers shall be shown on updated construction/site plans submitted to ISD.	BP and CO	Plng/ISD	

15	Garbage and recycling locations shall be clearly indicated on site plans. Storage areas shall be inside of the structure or shall be fully screened from view from both the public way and abutters by an appropriate material reviewed and approved by staff. The location shall not impact any parking, landscaping, or egress.	BP	Png.	
Engineering				
16	The Applicant must contact the Engineering Department to obtain addresses for all units prior to a building permit being issued.	BP	Eng	
17	The proposed basement finished floor elevation shall not be less than is 1 foot above the Seasonal High Ground Water elevation. The seasonal high ground water elevation shall be determined by a Massachusetts certified soil evaluator and stated on a signed soil test pit log.	BP	Eng.	
18	The Applicant shall complete the Site Plan Review Checklist and supply the information to the Engineering Office. The plans must comply with the City's Stormwater Management Policy.	BP	Eng.	
19	The applicant must comply with the: "Policy for new connections to and modifications to existing connections to the municipal sewer and drainage system stormwater management and infiltration/inflow mitigation." The Applicant shall work with Engineering to meet this condition and provide the required fees/mitigation.	CO	Eng.	
20	The Applicant shall submit a proposed drainage report, stamped by a registered PE in Massachusetts that demonstrates compliance with the City's stormwater policy.	BP	Eng.	
21	The Applicant must contact the Engineering Department to coordinate the timeline for cutting or opening the street and/or sidewalk for utility connections or other construction. There is a moratorium on opening streets from November 1 st to April 1 st and there is a list of streets that have additional opening restrictions.	BP	Eng	
22	The Applicant shall work with the Director of Engineering and perform any necessary mitigation, replacement or repair of water mains serving the site.	BP	Director of Engineering	
Miscellaneous				
23	Granting of the applied for use or alteration does <u>not</u> include the provision for short term rental uses, such as AirBnB, VRBO, or the like. Separate approvals are needed for the aforementioned uses.	Perpetual	ISD / Png.	
24	Trash and recycling shall be stored in or under the building.	Perpetual	ISD	
25	Trash shall be picked up by a private contractor.	Perpetual	ISD	
26	Snow removal shall be undertaken by a private contractor and all shoveled/plowed snow shall be removed from the site.	Perpetual	ISD	

27	The Applicant shall develop a demolition plan in consultation with the City of Somerville Inspectional Services Division. Full compliance with proper demolition procedures shall be required, including timely advance notification to abutters of demolition date and timing, good rodent control measures (i.e. rodent baiting), minimization of dust, noise, odor, and debris outfall, and sensitivity to existing landscaping on adjacent sites.	Demolition Permitting	ISD	
28	Gas and electric meters shall not be on the front of the structure. Gas and electric meters may be located on the side of the structure but shall be screened from the street by a hardy, staff approved evergreen planting. Utilities shall not be located adjacent to windows and shall not impact any parking, landscaping, or egress. The provisions of this condition may be waived by staff if the applicant submits a letter from the utility, signed by a utility representative, on utility letterhead, indicating that there is no feasible alternative to placing meters in violation of this condition.	CO	ISD	
29	Electrical conduits on the exterior facades of buildings shall be painted to match the wall material to which they are attached. Conduits are not allowed on the front of any structure.	CO	Plng.	
30	The Applicant, its successors and/or assigns, shall be responsible for maintenance of both the building and all on-site amenities, including landscaping, fencing, lighting, parking areas and storm water systems, ensuring they are clean, well-kept and in good and safe working order.	Perpetual	ISD	
31	Notification must be made, within the time period required under applicable regulations, to the Massachusetts Department of Environmental Protection (DEP) if there is any release of oil, hazardous materials, or regulated hazardous substances at the site. The City's OSE office, Fire Department and the Board of Health shall also be notified.	At time of release	OSE/FP/B OH	
32	Any suspected or identified underground fuel tanks on this site must be removed under the supervision of the Fire Prevention Bureau. Permits will be required for these removals.	CO	FP	
33	The Applicant shall at his expense replace any existing equipment (including, but not limited to street sign poles, signs, traffic signal poles, traffic signal equipment, wheel chair ramps, granite curbing, etc) and the entire sidewalk immediately abutting the subject property if damaged as a result of construction activity. All new sidewalks and driveways must be constructed to DPW standard.	CO	DPW/ISD
